← Lower risk Higher risk →

**The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.**

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 3 out of 7. This rates the potential losses from future performance at a medium-low level. In poor market conditions, defaulted investments are unlikely to negatively impact the fund's performance. The fund uses active derivatives, which increase the risk. Furthermore, there are other risks which are not included in the risk indicator. For detailed information, please refer to Part II, Item 16 of the prospectus. This product does not include any protection from future market performance so you could lose some or all of your investment.

### How long should I hold it and can I take money out early?

#### Recommended holding period: 5 years

The fund has no minimum holding period, but it is designed for medium to long-term investment. You should therefore be prepared to remain invested for at least 5 years. However, you can redeem your investment on any Austrian banking day (except for Good Friday and New Year's Eve), subject to the above-mentioned exit costs and without any penalty. The recommended holding period is chosen to keep the probability of nominal losses for investors (unit holders) during this investment horizon as low as possible. However, losses cannot be excluded.
